GIS Services Division

BooneMap Software

Project Summary – 01/20/10

The BooneMap software was first developed and customized for the Boone County GIS members in 2000. The goal was to replace the functionality of ArcView and Mapit! Using MapObjects. This environment provides the same basic functionality, but at a lower cost to the member agencies. Some of the basic functionality includes: loading and symbolizing themes, feature searching and identifying, querying features, and printing maps.

This software is a key component for getting Boone County GIS in the hands of the member agencies. Today, there are three applications in the BooneMap Suite: the original version (known as **BooneMap Classic**), the “light-weight” version (known as **BooneMap LT**), and the ArcGIS Desktop add-on (known as **BooneMap Workstation**). These three applications are responsible for getting Boone County GIS in the hands of over 700 GIS members across Northern Kentucky.

In the following sections, the current versions of all three applications will be discussed in greater detail.

This is a working document and will be updated periodically.
