Document Hyperlinking

Project Summary – 01/03/11

The Document hyperlinking project has been on-going in Boone County since early 2004. After several revisions of the “Proof of Concept” were completed, a final solution was implemented in the spring of 2008. Since 2004, however, the primary goal of this project has remained intact:

To provide its member agencies with access to important documents through a standard GIS application

The four (4) major components of this project include: 1) the hyperlinked documents: Building PrePlans, Control Point Datasheets, Emergency Contact Information, Facility Liaison, Material Safety Data Sheets (MSDS), Landslides, Sara Title III EHS Plans, Crisis Plans, and Tactical Worksheets, 2) the GIS data layer involved (Buildings, Monuments, and Railroad Crossings), 3) the standard GIS application (known as BooneMap LT), used to access multiple documents using HTML, and 4) an Access database, used to tie everything together and act as the hyperlink repository for both creation and organization.

For more information, please contact the Boone County Planning Commission, GIS Services
